

Hyde Hose Hog

HOSE CUT-OFF BLADES

Hyde's **Hose Hog™** slitter blades and hand knives provide hose cut-off operations the highest quality and performance available. Hose Hog™ slitter blades hold up to the toughest industrial hose, while producing a cleaner cut than can be achieved with abrasive wheels. **HOSE HOG™** hand knives offer dependable performance with great portability and can be used across the shop!

Whether you're cutting hydraulic, plastic, Teflon, metal or industrial rubber hose, Hyde Industrial Blade Solutions has you covered.

Machine Blades for Hose Cut-Off Operations

Steel slitter blades slice through hose for cleaner cut than abrasive wheels produce. The slicing action means less deformation and less clean-up after the cut. A simple, straightforward solution ... just what you'd expect from Hyde! Hose Hog™ slitter blades are available with bevel or wavy

scallop edges. The bevel edge offers versatility for cutting all types of hose. The wavy scallop edge is specially designed for any hose with a significant amount of steel in it - the wavy cutting action requires less pressure to make the cut, extending blade life.

Hand Knives for Hose Cut-Off Operations

Hyde hand knives provide portability and flexibility when cutting hose - they go where you go! They're great for maintenance departments as well as repairmen on the go, who may have to fabricate or repair hoses "on-site", away from the power cut-off saw. Three Hose Hog™ hand blade configurations ensure there's a knife that meets your needs.

"Hyde blades are a critical part of our hose fabrication operations. Hyde blades give us fast, clean cuts, day in and day out."
