Industrial Blade Solutions

## Blades & Knives for OEM Equipment

Steel choice, edge finish style, bevel angle, edge thickness, surface micro finish, hone technique, flatness, side run-out . . . all are critical functions that will affect the performance of a blade in use. Hyde has over a century of experience in providing the right specifications to optimize performance. Tell us what your equipment is designed to cut and we'll build you a blade to accomplish it.

Our in-house laser cutting capabilities enable us to cut unlimited shapes without expensive tooling. Our on-site, state of the art heat treating equipment provides us the luxury of controlling our own processing, absolutely necessary if flatness is a priority.

*Today's user requirements provide cutting challenges never before realized. Frequently shutting down equipment due to blade failure is costly and unacceptable. We have the experience to recommend specifications that will extend blade life, resulting in increased productivity and yield.*

Hyde stocks many types of alloys that are formulated to meet the cutting challenges of today. There's a fine line between edge performance and durability, and we provide products that address both of those requirements.

### Inventoried Material Types Include:

SAE 1050	316
SAE 1075	410
SAE 1095	440
SAE 8670	M2
SAE 4130	M4
52100	D2
301	A2
Chrome Vanadium	and others

Made in USA
